

I started studying math at Paradise Valley Community College in the first semester of my sophomore year of High School. I have enjoyed every math class that I have taken at PVCC, from College Algebra through Calculus III (which I am currently taking). I worked as a Teaching Assistant for an Intermediate Algebra class at the college for two semesters, starting when I was sixteen. I am currently working as a math tutor in the Learning Support Center at PVCC.

I have been accepted to the Barrett Honors College at ASU. My goal in studying Physics at ASU is to prepare for graduate school. It gives me much joy to discover new things. I like working with people, and when I discover something new to me I always want to share my knowledge with others. My plans may change, but at this moment my career goal is to either do corporate research or engineering, or teach Physics at the college level.
