

Kanako Minotto

I have always had an insatiable curiosity about the world around me. This, combined with an aptitude for math and science, has led me to focus on physics for my undergraduate work. Further, being able to one day apply my knowledge to benefit others is what motivates me. I think that a scholarship from the MIC Endowment will help me to focus on my studies and future research by assisting with some of the financial concerns I have. Finally, I believe that being a minority woman with a degree in physics may serve as motivation for others to pursue similar academic goals.
